The University of Mississippi

Creation, Suspension, Deletion and Review of Graduate Programs

The following are guidelines for the creation, suspension, deletion, and review of graduate programs.

1. The creation of a new graduate program must follow guidelines stated by the Institute of Higher Learning. This includes consideration of state-wide program duplication, student demand, and the availability of resources.

2. New graduate programs must be approved by a group of core graduate faculty, which will usually be an academic department, and must be endorsed by the Dean of the school or college administering the program. For a program that spans departments or schools, approval by each unit is expected, though a majority vote of an appropriately defined graduate faculty body will be taken as approval.

3. There must be sufficient core faculty to teach the graduate courses and to supervise research and creative activities of the students in the program. For this purpose, the core faculty group for a program should comprise at least four full-time, qualified faculty members. Qualified faculty must be members of the Graduate Faculty, meaning that they have the appropriate terminal degree in the discipline, or closely related discipline, and have a title of assistant professor or above. For a new doctoral program, the core faculty group must include at least one full member of the Graduate Faculty.

4. Emphasis areas of a degree program should adhere to the same standard regarding core faculty and the same procedures for approval, suspension and deletion.

5. The approval process for new graduate programs involves endorsement by the Graduate Council and the Council of Academic Administrators, and approval by the Chancellor. Forms and/or routing procedures will be provided by the Graduate School. In general, the following type of information should be provided to the Graduate Council: proposed curriculum; names and qualifications of the core faculty; evidence of appropriate approvals by the faculty; evidence of student demand and a projected enrollment; resources (e.g., office/laboratory space, library holdings, stipends, new faculty lines, etc.); impact on other programs; availability of courses (or needed new courses); admission's criteria; a program management plan; appropriate information about the thesis/dissertation and examination processes; and an explanation of any non-traditional aspects of the program, such as internships, off-campus or distance education delivery. All degree programs must be consistent with the Graduate School’s general academic rules governing master's, specialist, and doctoral programs. Any new program should also be consistent with the mission of the University. The process must follow IHL procedures, which may involve a pre-approval request and a formal request at particular times of the year.

A separate set of guidelines apply for the approval of graduate certificate programs.

6. When the proposed program involves new resources, the availability of funding for these new resources must be justified. If new courses are needed, a description of these courses should be
given. It is not necessary to have new courses pre-approved by the Graduate Council, but a
convincing case must be made that adequate courses can be delivered.

When the proposed program involves existing courses, an explanation should be given regarding
the scheduling of such courses, including those that might be taught outside the department
proposing the new program. Also, any internal reallocation of resources (e.g., space, stipends,
teaching loads, etc.), needed to deliver the new program, should be explained.

The ability to offer graduate courses in a timely manner is an important criterion for approval of
a new program.

7. Recommendations to delete a graduate program should be made with the approval of the
appropriate core faculty members, school/college dean, Graduate Council, and Academic
Council. However, deletion of a program may be an administrative decision based on limitations
of resources (including faculty), an IHL dictate, or a review of the program’s academic quality or
student demand. If a program is deleted, the students who are currently in the program should be
given the opportunity to complete the program, if possible, at UM.

Suspension of a program refers to suspension of admission of new students. The Graduate
School may suspend a program following a recommendation from the core faculty group and
appropriate dean. A suspension may be an initial step before deletion or it may be a step to
manage the flow of applicants.

8. Each degree program will identify a Graduate Program Coordinator and a list of core faculty.

9. All graduate programs must identify learning outcomes, must be prepared to provide evidence
that independent learning is fostered and that the educational requirements are progressively
more advanced than those of undergraduate programs, and must participate in the University=s
assessment process. Graduate programs that have professional accrediting agency must seek and
maintain accreditation. Additionally, a periodic review of graduate programs may be performed
under the direction of the Provost, Graduate Dean, or line Dean.
